

Music Visualization of Stephen Malinowski

- Different colors: purple, green, blue, yellow
- Different sizes: some are smaller, others are bigger
- At first the circles are filled, then they become unfilled
- The background is black
- Circles are connected with a line yet the line isn't consistent: it goes up and down
- Sometimes the circles overlap and other times the circles have a space between them
- Several types of bubbles and circles
- Different shapes as well; squares and rectangles
- The rectangles are different sizes and some are really long
- The length of sizes can be due to the note; some notes will be longer so the size of the shape will also be longer
- Music is composed of a variety of notes and the visualization really showcases the differences in notes via shapes, color, and designs
