Journalism in the Age of Data

- Humans are programmed to take in the world via visualization

- Visualization needs to be more about art

- Visualization needs to have a story with it to bring it all together

- There's new software in the market to make data visualization more impressive

- Data scientists can get inspiration for data visualization from the mundane aspects of life

- Sometimes the software that data scientists use gets out-dated after a few years

- Code needs to be written in a way so that it can be reused for future data visualization projects

- The software, Protovis, is now called D3
