Hadley Wickham

- Hadley Wickham is a top scientist in the field of data science & data visualization

- Tidy data is not clean data

    - There needs to be a specific way to document the observations

- He created several R packages in the early 2000s

    - Specifically tidyverse

- In his presentation, he used Hans Rosling data to show life expectancy and GDP via data visualization

    - He used animation

    - He used ggplot2

    - Ggplot stands for grammar for graphics

        - Is the data visualization tool in R

    - He walked the audience step-by-step to create the visualization & how to think critically about it to improve its look

- He also showed some of his data visualization using brain imaging
